                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPED; Information on the WORMPED database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   requests: clonerequest@sanger.ac.uk
on Oct 15, 2001 this sequence version replaced g1:14530013.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AL592044 236130 bp DNA 1 Human DNA sequence from clone RP13-407F1 on
                                                                                                                                                                                                                                                                                                                                                                                   http://www.sanger.ac.uk/HGP/Chr13
RP13-407F1 is from the library RPCI-13.2 constructed by the group
of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 13, constructed by the Sanger Centre Chromosome 13 mapping Group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence encodes a Borrelia burgdorferi B313 protein. The CC present invention describes an isolated nucleic acid (I) that: (i) CC encodes a polypeptide fragment (II) immunologically reactive with CC rabbit polycolonal antibody raised against a 13 kDa polypeptide of CC Borrelia burgdorferi B313, but not reactive with most proteins from CC other spirochaetes; and/or (ii) hybridizes under stringent conditions CC to specific nucleic acid sequences but not to genomic DNA from most CC vaccines to protect against infection by B. burgdorferi sensu lato. CC (I), (II) and transformed cells are useful in CC vaccines to protect against infection by B. burgdorferi sensu lato. CC (I), (II) and antibodies raised against (II) are used to diagnose such tests. (I) are also used to produce recombinant (II). The 13 kD protein is involved in virulence and is highly conserved within B. burgdorferi CC sensu lato, but is absent from other Borrelia species (e.g. those CC responsible for relapsing fever or avain borrelosis). It should provide CC compared with use of whole bacteria as antigen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     В
                                 The present sequence encodes a Borrelia afzelii ACAI protein. The CC present invention describes an isolated nucleic acid (I) that: (i) CC encodes a polypeptide fragment (II) immunologically reactive with CC encodes a polypeptide fragment (II) immunologically reactive with CC encodes a polypeptide of Sorrelia burgdorferi B313, but not reactive with most proteins from CC other spirochaetes; and/or (ii) hybridizes under stringent conditions CC to specific nucleic acid sequences but not to genomic DNA from most CC to ther spirochaetes. (I), (II) and transformed cells are useful in CC vaccines to protect against infection by B. burgdorferi sensu lato. CC (I), (II) and antibodies raised against (II) are used to diagnose such CC infections, in standard immunoassays or amplification/hybridization CC is involved in virulence and is highly conserved within B. burgdorferi cesponsible for relapsing fever or avain borrelosis). It should provide a more specific and sensitive antibody response, and diagnosis,
                                                                                                                                                                                                                                                                                                                    WPI; 199

rabbit polyclonal antibody raised against a 13 kDa polypeptide of conters spirochaetes; and/or (ii) hybridizes under stringent conditions to specific nucleic acid sequences but not to genomic DNA from most to specific nucleic acid sequences but not to genomic DNA from most to ther spirochaetes. (I), (II) and transformed cells are useful in vaccines to protect against infection by B. burgdorferi sensu lato. (I), (II) and antibodies raised against (II) are used to diagnose such infections, in standard immunoassays or amplification/hybridization tests. (I) are also used to produce recombinant (II). The 13 kD protein is involved in virulence and is highly conserved within B. burgdorferi sensu lato, but is absent from other Borrelia species (e.g. those responsible for relapsing fever or avain borrelosis). It should provide a more specific and sensitive antibody response, and diagnosis, compared with use of whole bacteria as antigen.
